PRESS RELEASE

MPS A320 SIMULATOR OBTAINS EASA APPROVAL

Groenekan, The Netherlands, 27 May 2013 ,--- Today Multi Pilot Simulations B.V (MPS), the innovative Dutch manufacturer of simulators, celebrates their first Airbus A320 fixed based simulator qualification to FNPT II MCC **and** FTD level as per EASA FSTD regulations. After the Boeing 737NG this is the second popular aircraft type for which MPS is able to deliver a full range of fixed based simulators with FNPT II MCC or FTD level EASA qualifications.

The MPS A320 TS (Type Specific) MCC comes standard equipped with a wide angle 200x 40 deg. FOV projected visual system and a qualification as a type specific FNPT II MCC per EASA regulations. The cockpit represents an exact replica of the A320 aircraft and MPS maximizes the use of the real a/c cockpit structure and parts for maximum fidelity and reliability.

Like all MPS types specific MCC devices the MPS A320 TS MCC can be upgraded at the request of the customer to an A320 FTD version by adding a collimated Visual System (200x 40 deg. FOV) of Level D quality, circuit-breakers panel door, upgrading the software and off course a re-qualification to EASA FTD Level 1 or 2.

About Multi Pilot Simulations (MPS)

Incorporated in 2007, Multi Pilot Simulations, The Netherlands, develops, manufactures and sells fixed-base, type specific (i.g. identical to Boeing 737-NG or Airbus A320) simulators for flight training organizations and type rating training organizations. Since August 2011 MPS has been backed by the Mainport Innovation Fund (KLM, Schiphol Group, RABOBANK and Technical University (TU) Delft) as an investor.
